

3D-NLS Health Analyzer---New Era of Health Management Uncover the Mystery of Sub-health

- ◆ “Hear” the body problem
- ◆ Find out the potential disease “sound”
- ◆ Disease prevention

2013 NEW

3D-NLS Health Analyzer:

3D-NLS instrument is based on huge cases and physiological database which is built by former Soviet Union scientists and American scientists. They spent 35 years to research according to clinical manifestations. Meanwhile, it cost billions of research funds.

Three Main Functions of 3D-NLS Machine:

- 1、 Detection of the human body, can easily and effectively grasp of human's physical condition, disease trends, healthy direction.
- 2、 It can confirm whether food and healthcare products are helpful or harmful to body organs.
- 3、 Two aspects of the repair function of body organs---energy repair and frequency spectrum repair.

3D-NLS Health Analyzer Characteristics:

➤ 3D-NLS is not invasive detection, safe, painless & nonradiative. The test will not cause any discomfort, non-voltage electrical stimulation, no touch the skin, without playing reagent, no any hazardous radiation damage, no any side effects.

➤ It only takes 30 minutes to complete the body of 16 kinds of 3D simulation CT scans detect for quick analysis and evaluation of health status.

- Easy to operate, portable, intuitive, can detect 256 items; 12 body systems; about 90% accuracy.
- Non-linear diagnostic system, visual 3D images, see human's internal organs, simple & fast, only wear an "earphone", can "hear" the body health problem quickly.
- Clear understanding of human's health risk assessment of next 3 ~ 5 years , reduce the chance of developing disease and to achieve the effect of "prevention is better than cure".
- The world's unique fusion of spectral quantum resonance analysis & acoustic resonance analysis.
- Test how different food / health care products affect the circumstances of the body.

How to Test

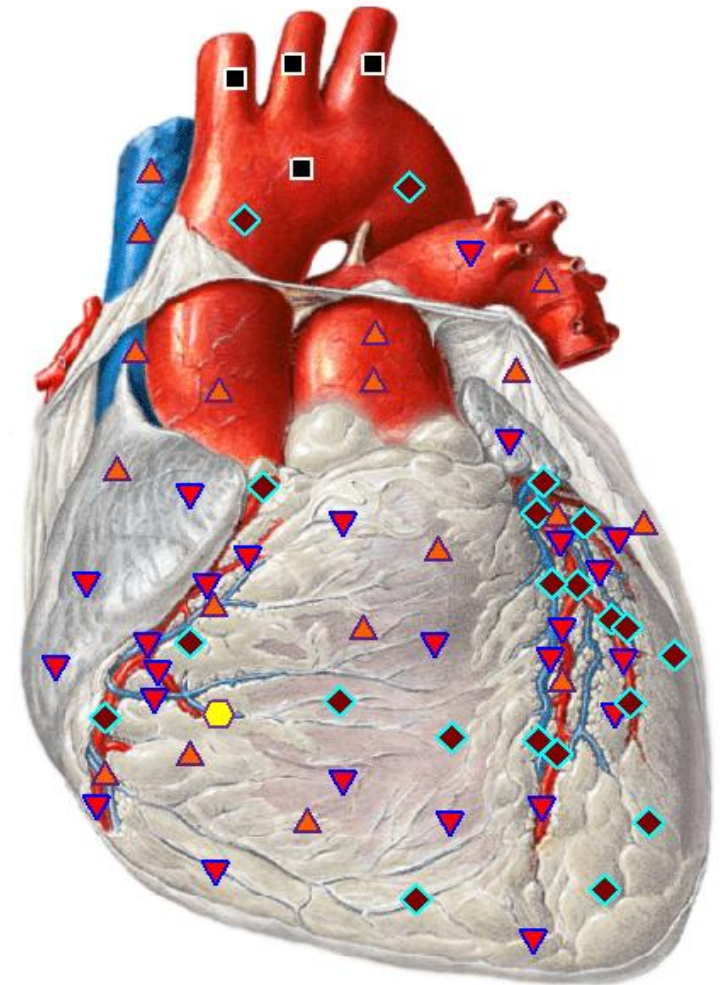

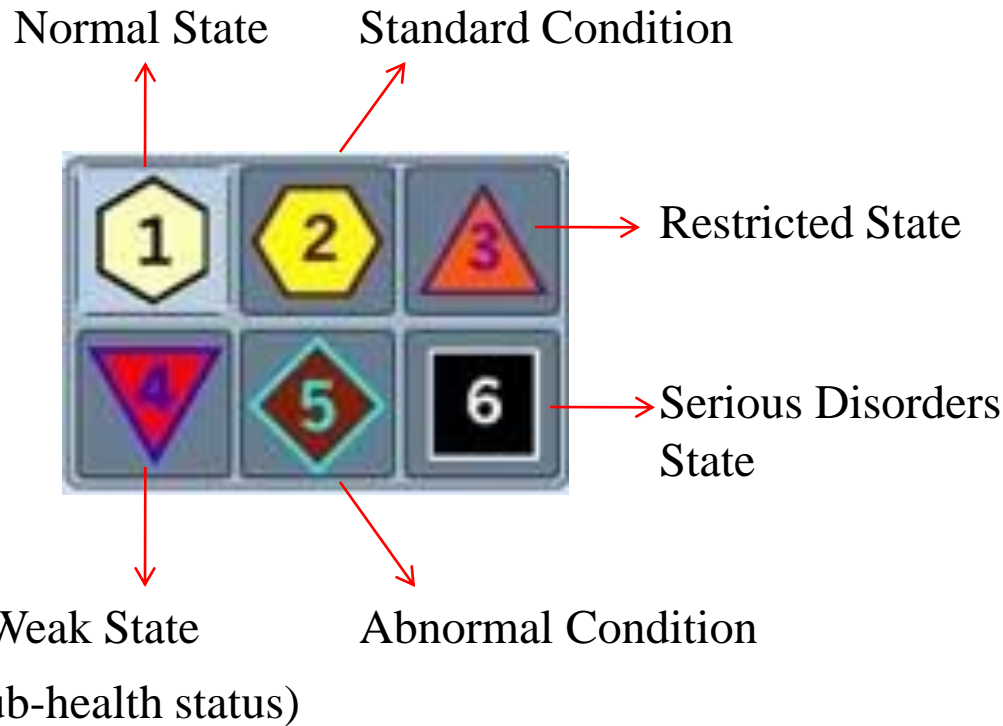

3D-NLS magnetic resonance analyzer and health management system will check the health disease quickly which physical examination can not find the detection. So health examination is more easy.

Test only needs to wear a headset looks like the low-frequency wave transmitter, the conduction through the nerve cells and cell resonance phenomenon, by using the resonance light detection by sonar transmission principle, can detect up to 100,000 points of body organs issued by the organization of individual cells in the sound spectrum, and quantum fluctuations in the frequency spectrum, the wavelengths can be reflected back through the understanding of physical condition.

3D-NLS Detection Signal

■ Signal input to the database to match, and then show the following several different situation:

Product Components:

- 1、 3D-NLS Analyzer Machine
- 2、 Headset type signal sensor
- 3、 USB cable
- 4、 Operating Manual
- 5、 Video teaching DVD
- 6、 Aluminum case
- 7、 Food or material analysis cup

Language:

English, Russian, Spanish, German,
Czech, Bulgarian, Italian, Chinese
